

March 19th - 20th 2025, Kenya

8:00 AM - 6:00 PM (East Africa Time) | Radisson Blu Hotel, Nairobi Upper Hill

Event Agenda.

**CLOUD SECURITY & CYBER RESILIENCE:
SHAPING AFRICA'S DIGITAL ERA**

- 8:00 - 9:00 — **Registration & Networking Breakfast**
- 9:00 - 9:15 — **Welcome Remarks**
- 9:15 - 9:35 — **Opening Keynote 1: The Future of Cloud Security in Africa**
- Cloud security in Africa is not standing still. This brings unique challenges and opportunities facing organisations adopting cloud technologies. From emerging threats, regulatory developments, and best practices for securing cloud environments, this is an overview of the cloud landscape from the future of cloud security skills to the importance of fostering a robust cybersecurity ecosystem across the continent.
- 9:35 - 9:55 — **Keynote 2: Cloud-Driven Scalability By Unlocking The Full Potential Of AI in Business**
- How can cloud computing and AI combine to drive business scalability? Leveraging cloud infrastructure enables the deployment and scaling of AI solutions, unlocking new opportunities for growth, automation, and innovation. But it also presents challenges.
- 9:55 - 10:25 — **Panel Discussion: Is Zero Trust Achievable In The Cloud?**
- Based on the security framework «never trust, always verify,» this discussion explores the challenges and potential solutions for implementing Zero Trust principles in cloud environments.
- 10:25 - 10:45 — **Speaking Slot: The Cloud Fortress: Build An Impenetrable Defense Through Unified Management**
- Cloud-first strategies demand robust security and compliance. Explores how integrated IT management empowers CISOs to streamline identity governance, automate compliance, and enhance threat detection for a secure cloud ecosystem.
- 10:45 - 11:15 — **Networking Break & Exhibition Tour**
- 11:15 - 11:55 — **Fireside Chat: Whose Data Is It Anyway? Navigating African Sovereignty**
- The impact of GDPR, Kenya's Data Protection Act, Nigeria's NDPR and South Africa's POPIA makes data sovereignty in Africa a complex and evolving issue. What are the various perspectives on data ownership and control within the African context? The discussion will also touch on the implications for businesses operating in Africa and the importance of navigating these complexities to ensure compliance and ethical data handling.
- 12:00 - 12:30 — **Case studies on how AI enhances threat detection and response**
- Real-world cloud intelligence threats and how they got resolved (or didn't).

12:45 – 2:00

Networking Lunch

2:00 – 2:30

Case Study Panel: The Cloud Security Playbook: Lessons Learned From Real-World Breaches

CISOs & CFOs discuss the financial and reputational impact of past breaches, repair and how they bounced back.

2:30 – 3:30

Roundtable Discussion: Is Your Cloud Secure Enough? The CISO-CTO Conversation That Matters

How can technology leaders align security with business growth? Emphasis should be made on the critical importance of cloud security and the need for collaboration between CISOs and CTOs. By focusing on assessing current cloud security measures, identifying potential vulnerabilities, and developing strategies to ensure data protection and business continuity in the cloud, these professionals can underscore a sense of urgency and importance. This is a conversation no organisation can afford to ignore.

3:30 – 4:30

Breakout Sessions:

- Securing Multi-Cloud & Hybrid Environments
- DevSecOps: Embedding Security In Cloud-Native Applications
- Cloud Disaster Recovery & Business Continuity Planning

4:30 – 5:00

Closing Remarks & Networking Coffee Break

8:00 - 9:00

Morning Coffee & Networking

9:00 - 9:15

Opening Remarks/Recap of Day 1/Intro of Day 2

9:15 - 9:35

Keynote 1: Cyber Risk Management Shouldn't Be This Hard!

Why is it so difficult to get any kind of action until the disaster has happened? Why are security managers so bad at calculating the business benefit of risk prevention, and even worse, at using it in a business case? Find out where the barriers exist, and how to break them or go around them, and more importantly how to prove that avoiding an incident is so much better business than just fixing the damage fast afterwards.

9:35 - 9:55

Keynote 2: The Enemy Within: Mitigating The Threats Posed By Rogue Devices.

Rogue devices—unauthorised or unmanaged devices connected to a network—pose a significant security risk. They introduce threats from data breaches to network disruption. Discover strategies for mitigating these risks through detection, prevention, and control measures.

9:55 - 10:15

Speaking Slot: Hunting the Hunters: Unmasking Cyber Threats Targeting Africa In 2025

Cybercriminals are evolving—are you? This session dives into the latest real-world threat intelligence trends shaping Africa's cybersecurity landscape. From AI-powered phishing and ransomware-as-a-service to mobile money fraud and deepfake scams, this session will expose the tactics, techniques, and procedures (TTPs) used by modern adversaries. Learn how to stay ahead by leveraging real-time intelligence, cross-industry collaboration, and AI-driven threat detection to turn the tables on cybercriminals.

10:15 - 10:45

Panel Discussion: AI V. AI: The Battle Against Ransomware

In the new cyber warfare battle, AI is used both offensively by ransomware attackers and defensively by cybersecurity professionals, making ransomware even more sophisticated. With AI turning on AI, how can AI-driven security solutions be developed to combat these evolving threats?

10:45 - 11:05

Keynote 3: Vendor Risk Management: Your Biggest Blind Spot?

Third-party vendors can be a major security vulnerability. CISOs must examine the risks associated with vendor access to their systems and data, and employ strategies for effective vendor risk management to protect the organisation from supply chain attacks and data breaches.

11:05 - 11:30

Networking Break

11:30 - 12:30

Demo: Level Up Your Defense: Gamifying Security Awareness

A live cyberattack simulation and war game with a scenario: handling a financial sector ransomware attack and crisis response.

12:30 – 1:00

Fireside Chat: Incident Response Planning For Critical Infrastructure: Preparing For The Inevitable

Cyberattacks on critical infrastructure can have devastating consequences. The crucial role of incident response planning cannot be overemphasised. Organizations must prepare for inevitable attacks to minimise damage, restore services quickly, and maintain public trust.

1:00 – 14:00

Networking Lunch

14:00 – 15:00

Roundtable: CISO Peer-to-Peer Strategy Discussion

A closed-door CISO Strategy Roundtable where security leaders can discuss their biggest challenges and exchange best practices in a confidential setting.

15:00 – 15:30

Roundtable: The CISO As Business Leader – Beyond IT Security

Making a financial case for cybersecurity investments while aligning cyber risk management with enterprise strategy takes a village. The modern CISO's role extends far beyond technical IT security. They are a strategic business leader who needs to effectively communicate cybersecurity risks to the board, align security initiatives with business objectives, and contribute to overall organisational strategy. This role is fundamental to driving digital transformation.

15:30 – 15:45

Health Break

15:45 – 16:45

Breakout Sessions:

Regulatory Compliance: Africa's Cyber Laws, Their Business Impact & You

What is the evolving landscape of cyber laws across Africa like? Examine their direct impact on businesses operating on the continent by reviewing key legal frameworks, data protection regulations, cross-border data transfer rules, and cybersecurity compliance requirements. The CISO needs insights into how businesses can navigate this complex legal environment, mitigate risks, and operate legally and securely.

Insider Threats: The Human Factor In Cybersecurity

Insider threats, whether malicious or accidental, pose a significant risk to organisations. Examine the human element in cybersecurity, exploring the motivations behind insider threats, the damage they can inflict, and strategies for mitigating this risk. Interrogate your best practices when it comes to protecting sensitive data and maintain business continuity.

Supply Chain Security: Preventing Third-Party Breaches

Third-party vendors and suppliers are often a weak link in an organisation's security. It is imperative to explore the risks associated with third-party access to sensitive data and systems and enact strategies for effective vendor risk management to minimise the potential for breaches originating from within the supply chain.

16:30

Networking Break
